1. Getting Started

The Paynter Bar Hub manages ordering, deliveries, stocktakes, pricing and reporting for the bar. It connects to Square (point of sale and inventory), OneDrive (document storage) and Xero via Amaka (accounting).

Logging in

- 1. Open the Hub.** Go to paynter-bar-hub.vercel.app on any device. It works on phone, tablet and desktop.
- 2. Enter your PIN.** Bar Management Team members use the management PIN. Residents may be given the read-only PIN, which shows stock and prices but allows no changes.
- 3. Stay signed in.** You remain signed in for 12 hours. After that, enter the PIN again.

Note PINs are held securely and can be changed at any time by the Bar Manager. If a PIN is changed, anyone already signed in stays signed in until their session expires.

Access levels

Access	What it allows
Management PIN	Full access — ordering, receiving, stocktakes, wastage, pricing, settings, all exports.
Read-only PIN	View only. Stock levels, sales and the price list are visible. Buy prices and the Pricing tab are hidden. Nothing can be changed.
Public price list	No PIN required. Opens the customer price list only, via the QR poster. Shows no stock or cost information.

2. Ordering Stock

All ordering runs through the Order Wizard, started from the Dashboard. There are two ways to start it, and they behave differently.

Weekly Order — the normal restock

Use this for the regular weekly order. The Hub calculates what needs ordering from recent sales, target stock levels and any minimum stock you have set.

- 1. Click Weekly Order on the Dashboard.** Only items the Hub calculates as needing stock appear, with suggested quantities already filled in. Items already sitting on another order carry a green ON ORDER badge so you do not double up.
- 2. Review the quantities.** Adjust any figure you disagree with. Set a quantity to 0 to leave that item off the order entirely. The list is in alphabetical order, so it is easy to check against the supplier's own list. Use + Add item to include anything not flagged — it searches the whole catalogue, so an item normally bought from another supplier (tonic water, for example) can still be added to this order.
- 3. Print the order list (optional).** Click Print Order List for a paper sheet showing item, on-hand and suggested quantity, plus a blank column to write in what you actually ordered. Useful while working through the supplier's website.
- 4. Place the order with the supplier.** Order through the supplier's normal channel. Dan Murphy's and Coles/Woolworths are ordered online. ACW is ordered online at acwsunshine.com.au.
- 5. Record the confirmation.** Update the quantities in the wizard to match exactly what you ordered — anything the supplier could not supply, or supplied in a different pack size — because this is what is recorded on the purchase order. Then enter the supplier's PO or confirmation number. If you already have the invoice, attach it here — it saves to OneDrive immediately.
- 6. Mark as ordered.** The Hub saves a purchase order to OneDrive, records it in PO Documents, and flags every item as on order.

Additional Order — events and one-offs

Use this when buying outside the normal cycle — a special event, a function, or anything management is paying for separately.

- Every item for the chosen supplier appears, regardless of stock level.
- All quantities start at zero. Enter a figure only for what you actually need.
- Anything left at zero is excluded from the order.

Good to know An item can sit on a weekly order and an additional order at the same time. Each order tracks its own quantity, and receiving one leaves the other untouched.

3. Receiving a Delivery

Always receive stock through the Hub. This updates Square inventory and files the paperwork.

- 1. Open the Receive modal.** From the Dashboard, click Receive on the on-order banner for that supplier.
- 2. Check what arrived.** Ordered quantities are pre-filled. Use All Full if everything arrived. Uncheck anything that did not arrive — it stays on order and can be received later. Adjust quantities for short deliveries.
- 3. Attach the supplier invoice.** Select the invoice PDF. It uploads to OneDrive as soon as you choose the file, and is attached to the email to the Treasurer.
- 4. Confirm the delivery.** The Hub updates Square inventory, saves a receive report and the invoice to OneDrive, updates the PO to Received, and clears the items from the on-order list.
- 5. Email the Treasurer.** Open PO Documents, find the delivery (it shows as Received) and check the invoice link is there — if it is missing, upload the invoice first. Click Email Treasurer. The button then shows Treasurer notified with the date and time, and Resend is available if you need it.

Important Buy prices in Stock Items are set manually — receiving a delivery does not change them, whether or not an invoice is attached. If no invoice is attached, the email to the Treasurer will have no attachment.

Checking a delivery against the order

- Print the Delivery List from View Order and tick cartons off as they arrive.
- Count every carton before signing the driver's docket.
- Great Northern cans arrive in cartons of 30, not 24.
- Wine cases hold 6 bottles.
- If a delivery is short, receive only what arrived. Do not adjust the quantity to match the invoice.

4. Stocktake

A stocktake counts physical stock and corrects Square to match. Do one at least monthly, and after any suspected discrepancy.

- 1. Print a blank count sheet.** Stocktake tab, then Print Blank Sheet. It lists every item by category with Square's current figure alongside a blank column for your count. Sparkling starts on a new page so the sheet can be split between two people.
- 2. Count the stock.** Count spirits in nips, wine in bottles, everything else in units. Include stock in the store cupboard as well as behind the bar.
- 3. Enter your counts into the Hub.** Type each counted figure into the Stocktake table.
- 4. Review the sync preview.** Click Sync to Square. The preview lists every item that will change, showing what Square holds now and what it will be set to.
- 5. Sync.** Confirm. Synced items turn green. Each sync is recorded in history with before and after figures.
- 6. Export the record.** Click History, then Export on that sync, to download an Excel record of exactly what changed. Keep this with the bar records whenever a large correction was made.

Warning Syncing sets Square's stock to your counted figure — it overwrites rather than adds or subtracts. Always read the preview before confirming.

Investigating a discrepancy

If Square and your physical count disagree by a meaningful amount, check these before assuming the count is wrong:

- Was a delivery entered with the wrong quantity? Compare recent receives against the supplier invoices — a case count entered as 120 instead of 60 will show up as a clean multiple.
- Was stock received outside the Hub, or collected in person and never entered?
- Was breakage or spillage thrown out without being logged in the Wastage Log?
- Was a free or promotional case put straight on the shelf?

Remember Wastage that is never logged is the most common cause of Square holding more stock than the shelf actually has.

5. Wastage Log

Record every breakage, spill and out-of-date item. This keeps Square accurate and gives the committee a true picture of losses.

1. Add the entry. Choose the item, quantity and unit, pick a reason, and add a note if it helps explain what happened.

2. Sync it to Square. Unsynced entries show a Sync button. Syncing moves that quantity out of stock in Square. Wine entered in glasses is converted to bottles at 4.545 glasses per bottle (a 165ml pour).

Note Once synced, an entry is locked — Square's stock has already been reduced. Editing or deleting the entry here would not change Square, and the two would silently disagree. Only the note and recorded-by fields stay editable.

If a synced entry was genuinely a mistake:

- Correct the physical stock in Square first, using a Stocktake.
- Then delete the log entry and confirm the force-remove warning.

Good to know Unsynced entries can be edited or deleted freely — nothing has reached Square yet.

6. Pricing

Prices are reviewed each January and July. Suggested prices work to either a 40% markup or a 30% margin — you choose which with the toggle in the Pricing view — rounded up to the nearest 25 cents.

Buy prices are set manually

Buy Price is entered and kept up to date by hand in Stock Items → Pricing. It is the single source of truth for markup, suggested sell price, stock value and profit calculations — nothing updates it automatically from supplier invoices or deliveries.

How markup is calculated

Item type	Markup
Beer, cider, soft drink, snacks	$(\text{sell} - \text{buy}) \div \text{buy}$, on the unit buy and sell price.
Wine sold by the glass	Calculated on revenue per bottle: $(\text{glass price} \times 4.545 \text{ glasses per bottle} - \text{bottle buy price}) \div \text{bottle buy price}$. 4.545 glasses per bottle is a 165ml pour.
Wine sold by the bottle	$(\text{bottle sell} - \text{bottle buy}) \div \text{bottle buy}$. Shown alongside the glass markup when a wine sells both ways.
Spirits	$(\text{sell per nip} - \text{buy per nip}) \div \text{buy per nip}$.

Markup or margin?

Markup is profit as a percentage of what you paid. Margin is profit as a percentage of what you charge, so the same profit gives a different figure. A 40% markup is a 28.6% margin, and a 30% margin needs about a 42.9% markup.

Suggested price

The Markup 40% / Margin 30% toggle above the Pricing table sets how the Suggested column is worked out. It applies to every item and is remembered for everyone.

- Markup 40%: suggested price = buy price $\times$ 1.40.
- Margin 30%: suggested price = buy price $\div$ 0.70.
- Rounded up to the next 25 cents. Wines sold by the glass and the bottle show the glass price, with the bottle price underneath.
- Suggested prices are a guide only. Change sell prices in Square, not in the Hub — the Hub reads live prices from Square on every Refresh.

Reviewing prices

- The Pricing view in Stock Items shows Buy Price, Sell Price (both glass and bottle for wine, side by side) and the Suggested price.
- The actual Markup % is under Show Details, colour-coded green (40%+), amber (25–40%) or red (below 25%).
- Items missing a buy price are flagged with a red  banner and a “\$ missing” tag.
-  Compare Both, in the Pricing toolbar, downloads an Excel sheet comparing the suggested price at Markup 40% and Margin 30% side by side for every priced item, with the dollar difference. Reference only — it changes no prices, and items with no buy price or ticked Rundown are left out.

7. Reporting

Monthly Report

A one-click summary of any month, intended for committee reporting. Choose the month and year, then click Generate.

- Revenue, with the change against the previous month
- Units sold, and how many distinct items sold
- Wastage cost, broken down by reason
- Orders placed, per supplier, with received and pending status
- Average markup across all priced items
- Sales by category, with month-on-month movement

Click Excel to download the whole report as a single formatted sheet, ready to attach to committee papers.

How wastage is valued Wastage is valued at each item's current buy price. Entries do not record the price paid at the time, so the figure means what that wastage would cost to replace today. Items with no buy price set are excluded, and the report says how many.

Sales Report

Sales by item and category for any date range, with a comparison period against the prior period.

Wine sold both by the glass and by the bottle shows separate Glasses and Bottles columns automatically. The Bottles column only appears when at least one item has bottle sales in the selected period.

Sort the item table By Units, Slowest First (the slowest sellers at the top), By Revenue or By Profit. The Cost, Profit and Margin columns, and the Profit box at the top, show gross profit: revenue less the buy price of what was sold.

About profit Items with no buy price cannot be costed. They are left out of the profit total and margin, and an amber note above the table says how many. Wastage and stock losses are not included. Profit shows on screen only — the Print and Excel exports do not include it yet.

SOH History and stock trend

A Stock On Hand snapshot is saved automatically on the last day of every month, capturing every item's quantity and value.

- The trend chart plots total stock over time. Switch between dollar value and units, and filter to a single category.
- Click any snapshot to see the full item-by-item breakdown for that date.
- Use Snapshot Now to take an off-cycle record — for example, immediately after a major stocktake correction.

Do not delete snapshots They are the basis of the stock figure reported to the committee.

Other reports

Report	Purpose
Sales Report	Sales by item and category for any date range, with a comparison period, plus cost, profit and margin per item.
PO Documents	Every purchase order, its invoice, and its receive report.
Barcode Sheet	Printable barcodes for bar staff to scan drinks at the Square POS.

8. Troubleshooting

Problem	What to do
Cannot log in	Check the PIN with the Bar Manager. After ten wrong attempts the Hub locks that device out for 15 minutes.
OneDrive says not connected	Go to Settings and reconnect OneDrive. Documents already saved are unaffected.
Square inventory did not update	The receive report and invoice are already saved. Retry the Square update from the receipt screen.
An item is missing from the order wizard	It may be marked Do Not Order in its notes, flagged as rundown, or already on another order. Check Stock Items.
Square shows more stock than the shelf	Usually unlogged wastage, or a delivery entered with the wrong quantity. See Investigating a discrepancy in section 4.
Square shows less stock than the shelf	Usually a delivery that never went through the Hub, or a free case put straight on the shelf.
A wastage entry was logged in error	If it has not been synced, delete it. If it has been synced, correct the stock in Square via a stocktake first, then force-remove the entry.

9. Who to Contact

Role	Name
Bar Management Team	Graeme Martin, Russel Green, Bob Taylor, Bruce Campbell
HOC Representative	Christine Yeldham
Suppliers	Dan Murphy's · Coles/Woolworths · ACW (acwsunshine.com.au)

Paynter Bar Hub · [paynter-bar-hub.vercel.app](#)
