

Paynter Bar Hub

Stock Ordering & Inventory Procedures

GemLife Palmwoods — Bar Management Committee

1. Overview

The Paynter Bar Hub is the bar management system for GemLife Palmwoods. It connects directly to Square POS to provide live stock levels, sales analytics, automated reorder calculations and complete purchase documentation — all in one place.

The Hub is accessed at paynter-bar-hub.vercel.app and works on any device with a browser.

Access

- Committee PIN — full access to all features including ordering, settings, pricing and exports
- Read-only PIN — view-only access for homeowners; no editing, no pricing data

Sidebar Navigation

-  Inventory — Dashboard, Reorder Planner, Stocktake, SOH Report, SOH History
-  Analytics — Sales Report, Quarterly Trends, Best & Worst Sellers
-  Bar — Specials, Price List, Wastage Log, Notes
-  Administration — Documents, Price History, Barcode Sheet, Roster
-  Settings — Suppliers, Square vendor names, target weeks, backup

2. Weekly Stock Ordering

The ordering process runs weekly. The Hub calculates suggested order quantities based on current Square stock levels and the previous 90 days of sales.

Step-by-Step Process

1	Open the Hub and click Refresh from Square in the top-right header to pull the latest stock levels and sales data.
2	Go to  Inventory → Reorder Planner. Tick "Order items only" to show only items needing replenishment.
3	Review the suggested quantities. Adjust Order Qty for any items if needed (e.g. seasonal changes, known upcoming events).
4	Click a supplier tab (Dan Murphy's, Coles Woolies, ACW). The  Order Sheet and ✓ Mark as Ordered buttons appear.
5	Click  Order Sheet to open a formatted printable order list. Use this as a reference when placing the order online.
6	Place the order directly on the supplier's website (Dan Murphy's, Coles, ACW).
7	Return to the Hub and click ✓ Mark as Ordered. Enter the PO reference number from the supplier confirmation.
8	Repeat steps 4–7 for each supplier.

Notes

 *Dan Murphy's and Coles orders are placed online. ACW orders are placed by phone or email.*

 *The Hub generates a Purchase Order Excel file automatically and saves it to OneDrive when you click Mark as Ordered.*

 *The PO reference number links the order to its receive report and invoice in the Documents tab.*

3. Receiving Stock

When a delivery arrives, update the Hub to reflect the actual quantities received. This automatically adjusts Square inventory.

Step-by-Step Process

1	When the delivery arrives, a coloured banner appears at the top of the Reorder Planner showing the pending order.
2	Click the banner and select Receive to open the receive modal.
3	Enter the actual quantities received for each item. Note any short deliveries.
4	Attach the supplier invoice PDF using the file picker in the receive modal. This saves the invoice to OneDrive and automatically extracts line item prices for the Price History database.
5	Click Confirm Receive. Square inventory updates automatically for all received items.
6	A formatted receive report is saved to OneDrive under Receive Reports → {Supplier}.
7	The order record in the Documents tab is updated with links to the PO, receive report and invoice.

Important Notes

 Always attach the supplier invoice PDF before confirming. This keeps the Documents tab complete and feeds the Price History database.

 If quantities differ from the PO, enter only what was actually received. Contact the supplier about any short deliveries.

 Spirits are tracked in nips. Enter the number of full bottles received — the Hub converts to nips automatically.

4. Price History & Buy Prices

The Price History system tracks actual buy prices from supplier invoices over time. It calculates weighted average buy prices per item so you can maintain accurate margin calculations.

How Prices Are Captured

- Automatically — when you attach a supplier invoice PDF in the receive modal, Claude AI extracts all line item prices in the background. No manual action needed.
- Manually — go to Administration →  Price History → Import Invoice to upload historical invoices.

Reviewing Average Prices

1	Go to Administration →  Price History →  Average Prices tab.
2	Select the period (30/60/90/180 days) and click Load Report.
3	The report shows weighted average buy price per item, min/max range, number of invoices, and comparison to your current Hub buy price.
4	Items shown in red have a Hub buy price higher than the invoice average — consider updating.
5	Click ↑ Update next to any item to set the Hub buy price to the invoice average.

Setting Buy Prices Manually

Buy prices can also be set directly in the Reorder Planner:

1. Select \$ Pricing in the controls bar.
2. Click the Buy Price cell for any item and type the cost price per unit (per bottle for wine, per can/bottle for beer, per nip for spirits).
3. The margin % calculates automatically based on the Square sell price.

 *Spirits: buy price is per nip (30ml or 60ml depending on the item), not per bottle. The Price History report converts invoice per-bottle prices to per-nip automatically using the bottle and nip sizes stored in the Hub.*

5. Documents

The Documents tab (Administration →  Documents) tracks all purchase orders, receive reports and supplier invoices in one place. All documents are also saved to OneDrive.

Document Types

- Purchase Orders — generated automatically when you click Mark as Ordered. Saved to OneDrive → POs Invoices and Receive Reports → Purchase Orders → {Supplier}.
- Receive Reports — generated automatically on confirm delivery. Saved to OneDrive → Receive Reports → {Supplier}.
- Supplier Invoices — attached in the receive modal. Saved to OneDrive → Invoices → {Supplier}.

 All three documents are linked together in the Documents tab by PO reference number. Click any link to open the document directly in OneDrive.

6. Quarterly Stocktake

A physical stocktake is conducted quarterly to verify Square's stock levels against actual counts.

Preparing the Stocktake Sheet

1	Go to  Inventory → Stocktake in the sidebar.
2	Click  Excel to download the stocktake spreadsheet.
3	Print the spreadsheet or use it on a tablet.
4	Enter physical counts in the Cool Room, Store Room and Bar columns for each item.
5	The Total Count and Variance columns calculate automatically. $\text{Variance} = \text{Total Count} - \text{Square on hand}$.
6	For spirits: enter bottle counts including decimals (e.g. 4.5 for a bottle that is half full). The sheet calculates nips automatically.
7	Investigate and resolve any significant variances with the bar manager.

Stocktake History

Previous stocktakes are saved under Stocktake → History tab. Each record shows a Summary sheet (by session and date) and a Data sheet (all individual item counts, filterable).

7. Stock on Hand Reports

SOH Reports give a point-in-time view of all stock levels, values and order status.

Monthly SOH Snapshot

A snapshot is taken automatically at 2am AEST on the 1st of each month. To view:

- Go to  Inventory → SOH History
- Each row shows the date, item count and total inventory value
- Click  Excel to download any snapshot as a formatted Excel file

On-Demand SOH Report

- Go to  Inventory → SOH Report
- Click  Print / PDF for a formatted A4 report of current stock
- Click  Excel for a formatted Excel download

 Always click Refresh from Square first to ensure the data is current before generating an SOH report.

8. Wastage Recording

All bar wastage (breakages, spillage, staff drinks, tasting) must be recorded to maintain accurate stock levels.

- 1 Go to  Bar → Wastage Log in the sidebar.
- 2 Click + Add Entry.
- 3 Select the item, enter the quantity wasted, select the reason and add notes if required.
- 4 Click Save. The entry is recorded with the date and logged against the item.

 *Wastage entries are for record-keeping only — they do not automatically adjust Square inventory. Stock adjustments must be made directly in Square POS.*

 *Click  Print in the Wastage Log to export a formatted A4 report of the current filtered entries for the treasurer.*

9. Settings & Configuration

The  Settings panel (committee access only) manages suppliers, default target weeks, and data backup.

Managing Suppliers

- Add or remove suppliers in Settings → Suppliers
- Set the Square vendor name for each supplier — used to match invoices in Price History
- Assign items to suppliers by clicking the Supplier column inline in the Reorder Planner

Target Weeks

The default target stock weeks (default: 6) determines how much stock the Hub suggests ordering. A higher value means more conservative ordering to avoid running out. Override per item using the Target Wks column in Show Details mode.

Data Backup

All settings are automatically backed up to Supabase on every change. Use the Sync button in Settings to manually trigger a backup if needed. If Square or the Hub app is offline, no data is lost.

Recent Changes Audit

The Settings panel shows the last 30 setting changes including item name, field changed, old value, new value and date. Use this to review and verify any changes made by committee members.

10. Quick Reference

Task	Where to go
Weekly ordering	Inventory → Reorder Planner → Select supplier tab
Receive a delivery	Reorder Planner → Click pending order banner → Receive
View/export documents	Administration → Documents
Review buy price averages	Administration → Price History → Average Prices
Import old invoices	Administration → Price History → Import Invoice
Update buy prices	Reorder Planner → \$ Pricing view → Click Buy Price cell
Quarterly stocktake	Inventory → Stocktake → Excel export
Monthly SOH report	Inventory → SOH History → Excel on any snapshot
Sales performance	Analytics → Sales Report
Add/edit specials	Bar → Specials
Log wastage	Bar → Wastage Log → + Add Entry
Manage suppliers	Settings → Suppliers
Refresh from Square	Any screen → Refresh button top-right
